TEST COMMENTS: *This long-term corn site received excessive rains several times this season, but Brian estimates that the most damaging rainfall event was in mid-June, when he received over 5 inches of water. This set the tone for a soggy root zone in this well-tiled but flat field. The soil never dried out until harvest, affecting yields across his field.* Lat: N44.3411, Long: W95.54589

Yield & Income Factors: Base Moisture = 15.0% Shrink = 1.4 Drying = \$0.060 Price = \$5.25
